

## **MANAGEMENT SYSTEM POLICY**

**We, as Atik Metal, aim to;**

**Walk towards our vision in the light of our values**

**Be the preferred company as human, environment, customer and quality oriented**

**Ensure business continuity and continuous improvement**

**To achieve these goals, we;**

- **comply with compliance obligations,**
- **determine our targets with strategic management for improving our environment, health and safety and quality performance,**
- **walk together for success with our employees by improving their knowledge, skills and awareness in Atik Academy,**
- **raise the leaders of the future by supporting development of our employees,**
- **use new technologies in our processes and choose safe and environmentally friendly technologies,**
- **reduce our natural resources consumption by using our resources effectively and efficiently,**
- **implement systems to reduce waste at its source, collect and dispose in appropriate conditions,**
- **increase our environmental performance by continuously improving our processes and management systems,**
- **increase the life quality of employees by making the work environment safe and healthy,**
- **develop and implement systems to ensure occupational health and safety in our operations and to prevent accidents,**
- **ensure continuity in meeting customer needs and special requests with customer focused internal communication,**
- **support, implement and conduct design activities that aim to improve performance of purchasing, energy efficient, safe, environmentally friendly products and services,**
- **provide continuous improvement through innovative, creative projects that increase productivity and reduce costs through participation of our stakeholders,**
- **ensure our sustainability by being structured to intervene in emergency situations with risk management, including administrative risks,**
- **work with the participation of all our employees to be a company that is creating value, continuously developing, sustainable, preferable, communicable and transparent in quality, environment, OHS and energy applications, in terms of customers, employees, suppliers, neighbors, society and all our stakeholders.**
